EVALUATE+

remove_duplicates(set: SET_ENUMERATION): SET_ENUMERATION

value: BOOLEAN

-- holds if it is type correct.

make_eval(e: EXPRESSION)

-- type check constructor

- NONE

evaluate(e: EXPRESSION): EXPRESSION
-- recursively evaluates expression.

COMPOSITE

EXPRESSION*

visit(v:VISITOR):+
--- all expressions can be visited.

BINARY_OPERATION COMPOSITE_EXPRESSION

UNARY_OPERATION

○NULL_EXPRESSION

Note: Evaluate does not inherit from VISITOR because all types of expressions are evaulate by one recursive function. In other words EVALUATE Is a ultility class.

Concise views of the composite side or the pattern are used because expanded views are already shown on the previous page.
